INTEGRAL ORIFICE PLATE ASSEMBLY

MODEL: SC / R - 1000

The Integral Orifice Plate Assembly is a compact, precision-engineered differential pressure flow measurement device specifically developed for accurate and repeatable flow measurement in small line sizes below 2". . It is designed using the differential pressure principle, providing reliable and economical flow measurement for compact installations.

The Integral Orifice Plate Assembly is designed in conformity with ISA Recommended Practice RP 3.2 and is manufactured in strict accordance with internationally recognized flow measurement standards. Calculations are performed in accordance with:

- ISO 5167
- BS 1042
- ASME MFC-3M
- R.W. Miller flow measurement principles
- AGA-3 standards for gas flow measurement
- L.K. Spink validated empirical and field-proven methodologies

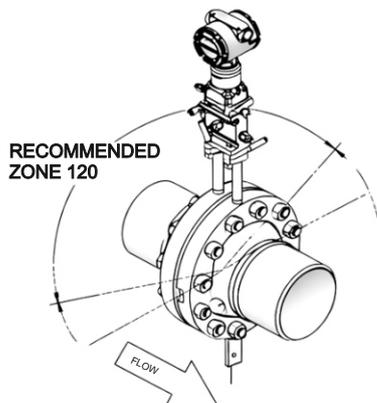

KEY FEATURES

- Minimizing installation errors
- Reducing space requirements
- Ensuring long term measurement stability
- Allows direct mounting of manifold valves & transmitters

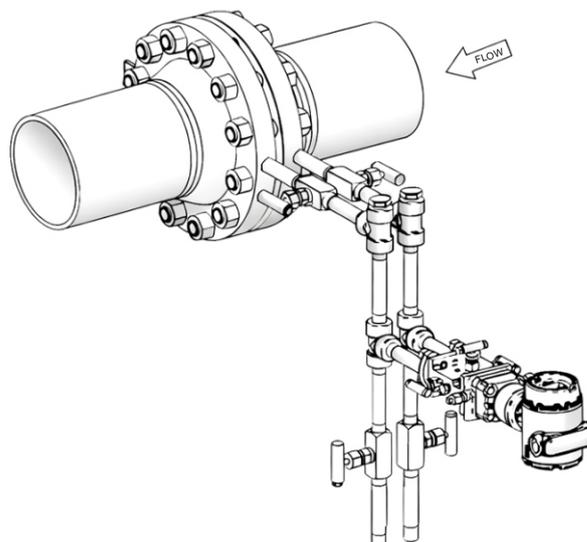

SUITABLE FOR

- Low flow rates
- Limited straight pipe runs
- High intensity measurement requirements
